

## PRE-LAB WRITING ASSIGNMENT

### Fill-in-the-Blank Questions

1. Compilers detect **syntax** errors.
2. Usually the most difficult errors to correct are the **logic** errors, since they are not detected in the compilation process.
3. Attaching other pre-written routines to your program is done by the **Linking** process.
4. **Binary** code is the machine code consisting of ones and zeroes that is read by the computer.
5. Dividing by zero is an example of a **run time** error.
